Just in case anyone is curious - the work on MD 305 at Tanyard Rd. is emergency pipe repair. Crews are installing pipe extensions and pumping grout around the pipes and into voids to address erosion. This is a temporary fix - long-range solution likely will require roadway excavation and new pipes or perhaps a box culvert. Currently there are three 48-inch pipes here to carry Three Bridges Branch out to the Corsica River. Lot of water rolls through here during heavy rains.

Thanks for the information. Also please note: Everyone needs to pay more attention themselves when turning onto 305 from Tanyard. The sign guys were asleep at the switch Saturday morning almost causing a head on collision with my son and another driver. Both were shown signs saying "Slow" at the same same.

Thank

MD 304 Overpass Update - While many were asleep this morning the final section of the MD 304 bridge deck was pumped/poured. Here are pix showing that while a lot of machinery is involved, it still takes manual labor to get this done. Monday we're going to close the J-turn in front of Maryland State Police to get some pipe conduit across the highway for future utility connections. This closure will be in place about two weeks then crews will move to a southbound lane closure to wrap up the work. Expect traffic on the overpass by mid-summer. Not final configuration yet - we just need to get traffic across 301 so we can shut down the old ramp from westbound MD 304 to northbound US 301 and connect the new ramp and roundabout.
